Work Experience

Citrix | SOFTWARE ENGINEERING INTERN | ANDROID, iOS, UIAUTOMATOR, ROBOT FRAMEWORK, NODE, ANGULAR5

- Helped improve the reliability of XenMobile BVT and FVT by solving challenges pertaining to application testing and automation.
- Created mobile application modules that covered all the third-party interactions with Citrix XenMobile applications which helped reduce effort required for building test cases and made the existing tests more robust.
- Developed a dashboard application that allowed XenMobile managers, developers, and stakeholders to gauge the status of daily test suite runs.

Bangalore, India

Jan. 2018 - Jun. 2018

Google Summer of Code | STUDENT DEVELOPER | PHP, JAVASCRIPT

- Worked on developing a replacement calendar and scheduling module for LibreHealthEHR.
- This also involved removal of references to legacy modules, isolation of the SMARTY template engine, and writing database migration scripts.

Remote

May. 2017 - Aug. 2017

Projects

Who's Up?! | ANDROID, WINDOWS PHONE

- A social app which acts as virtual notice board for strangers to signal when they're free for an impromptu meet up or activity.
- Originally made for Windows Phone during Microsoft's code.fun.do Hackathon.

Apr. 2017

Elementary Browser | ELECTRON

- A light-weight browser I co-built on Electron, with features such as unified search/address bar, history, and bookmarks.

Nov. 2016

GoT Twitter Stream | WEB

- A real time twitter stream client built using Node and React.
- Tweets are initially rendered on the server-side; any new tweets that come in are emitted via Socket.io.

Jul. 2016
